

GenTera MT processor

MT3 Presentation

Hans de Vries

Lead-Architect

Gentera Inc. San Mateo, CA

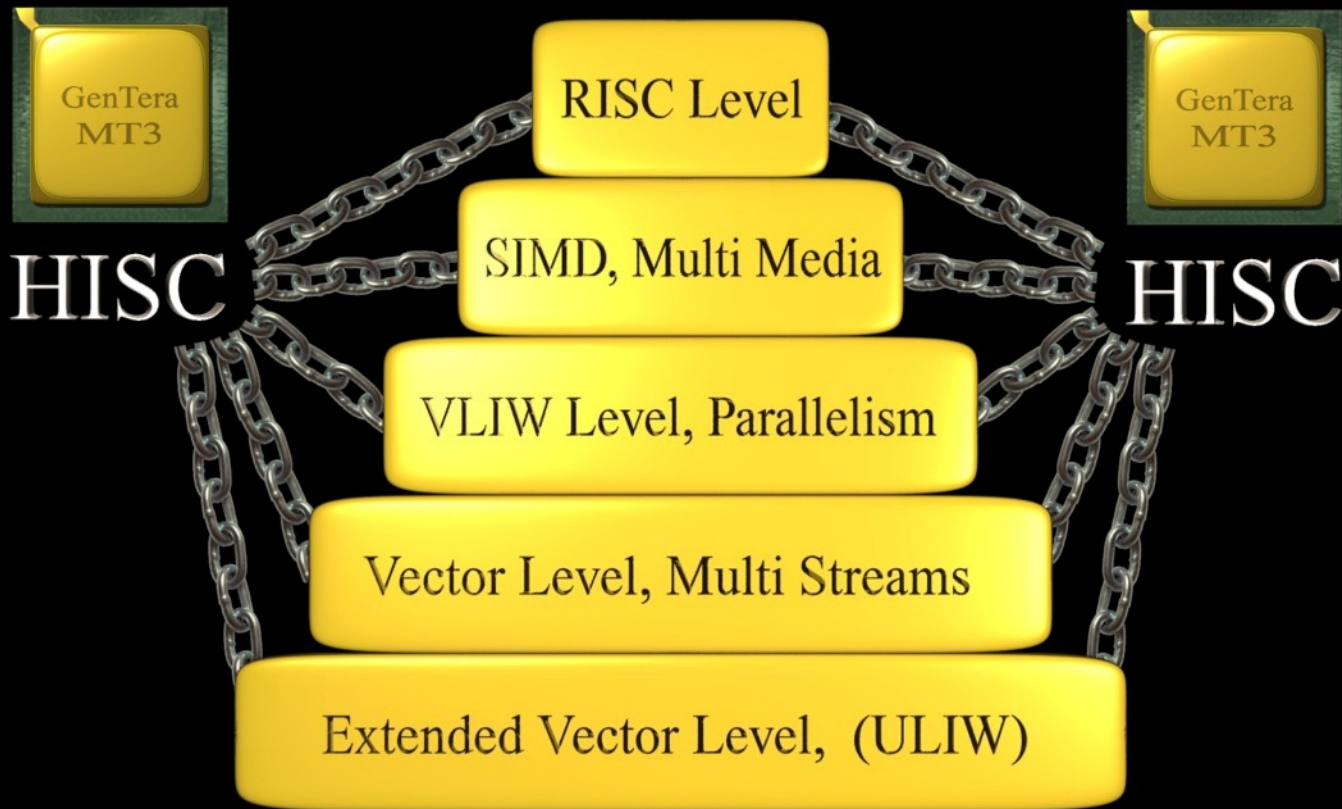

Presentation

GenTera MT processor

Presentation

GenTera MT processor

Presentation

GenTera MT processor

MT3 Advanced Functionality

Adv. Pipelined
Integer, Fractional,
DSP and SIMD
operations

Video codec
support
functions

Adv. Pipelined
Floating Point:
+ - x / $\sqrt{\quad}$ sin cos
ln exp asin acos

routing

Streaming SIMD
data & multi media
array access

On Chip
Data, Instr.
cache access

Streaming 3D
texture & volume
access and
preprocessing

Presentation

GenTera MT processor

The flexible Multiplier handles all Multiplications with the same hardware

Presentation

GenTera MT processor

Multi Functional Multipliers

Pixel Processing:
8x8 and 8x16 with
16 bit coefficients and
internal vector file.

- 4x4 Matrix x Vector
- Quad Vector Inproduct
- Open GL Blending
- (Vector) Accumulation
- Range Clipping

Presentation

GenTera MT processor

Multi Functional Multipliers

Audio and Sonar:
16x16 and 16x32 with
32 bit coefficients and
internal vector file.

- Dot and Cross Products
- Complex Products
- Quad FIR Filter Stages
- (Vector) Accumulation
- Range Clipping

Presentation

GenTera MT processor

Advanced Pipelined Floating Point

Multiple independent
Five stage units can
produce floating point
results each cycle.

- Reciprocal and Sq Root
- Exponent and Logarithm
- Sine and Cosine
- ArcSine and ArcCosine

Presentation

GenTera MT processor

Streaming SIMD
data & multi media
array access:

Multiple SIMD words
per cycle with arbitrary
byte address offsets

- 1D, 2D and 3D Arrays
- Horizontal / Vertical
- Read and Write

Presentation

GenTera MT processor

Streaming
Perspective 3D
texture & volume
processing units

Gen. functionality
for many applications

- Fully Open GL compatible
- 32, 16 and 8 bit components

Presentation

GenTera MT processor

Curved Texture Mapping

Streaming addresses for the Perspective 3D Texture and Volume units can also come from Advanced Floating Point units or SIMD memory Data

- All Perspective and Lighting operations handled by the 3D pipelines
- All Bi, Tri and Quad Linear interpolations handled by 3D pipelines
- Allows the highest quality graphics without triangle explosion

Presentation

GenTera MT processor

Curved Texture Mapping & Advanced Floating Point

Example:

- Cartesian to Polar Conversion:
 $X = r \cdot \cos(\varphi)$, $Y = r \cdot \sin(\varphi)$
one conversion / cycle.
- Polar to Cartesian Conversion:
 $r = \sqrt{X^2 + Y^2}$, $\varphi = \arccos(X / (\sqrt{X^2 + Y^2}))$
one conversion / cycle.

Presentation

GenTera MT processor

Motion Estimation &
Pattern recognition
MPEG 1....MPEG4

- Compares 128 8 bit pixels /cycle
- MxN kernel size up to 256 x 256
- Search window: 4096 x 4096
- Reduced Search Space Algorithms

Presentation

GenTera MT processor

Motion Estimation,
Pattern recognition
in co-operation with
the Multipliers

- Half, quarter 1/8 and 1/16 pixels
- Arbitrary Scaling and Rotation
- High Quality Bi-Cubic Interpolation
- up to 120 million block compares/s

Presentation

GenTera MT processor

Digital Video Decoding

Video
Bit Stream
Input

VLC Bitstream Decoder and
Coefficient DeQuantizer

- Currently for MPEG 2,
- H.261 and MPEG 1
- Bit stream in / Coefficient out
- Next step is the DCT transform

Select

Decode

Scan

Scale

Dequant.

DCT coef.
DCT coef.
DCT coef.

Presentation

GenTera MT processor

Memory management: 1D, 2D and 3 Dimensional

Support for Virtual Memory Management uses 1D Pages, 2D Tiles and 3D Bricks.

- Simple Allocation and De-allocation
- High Memory Efficiency
- Optimizes DRAM access

Presentation

GenTera MT processor

3D Volume Memory Management:

Empty space doesn't waste Memory !

Presentation

GenTera MT processor

Image Mask Generation Hardware

Pixels written to Memory
must pass the :

- The Polygon Mask
- The Window Mask
- The Depth Buffer Mask
- The Auxiliary Mask for various extra functions
- Supports the full Memory bus Bandwidth

Presentation

GenTera MT processor

High speed Dataflow ring for Inter Processor
Stream communication, Point to Point or Broadcast

Presentation

GenTera MT processor

High End system design is enabled by
the flexible I/O options

Video Input

Video Output

High End
System I/O

Presentation

GenTera MT processor

Future

Sony's Asimo

Future applications will use more real world intelligence

Presentation

GenTera MT processor

3D Human
Face
Recognition

Acquisition

Reconstruction

High End applications are being developed today. Expected to grow to a billion chips/year market after 2012

Presentation

GenTera MT processor

Face Recognition for Homeland Security

2005: Biometric chips in US Passports and Visa

Presentation

GenTera MT processor

2004: Doll Cindy recognizes and speaks written texts to help a child to learn to read and write.

2012: Highly intelligent toys can recognize a child and its mood by its face and facial expressions.

They will be to act and communicate intelligently.

Presentation

GenTera MT processor

3D object match

Views generated with
the Graphics Pipelines

and then matched with the "Motion Estimator" unit

Presentation
